Section 1: Overview

If clients want to ensure that the system applies accurate tax validation results based on the region in which the good or service event is performed, they need to set up a ship-to address in Invoice.

Further, clients who work with purchase requests and purchase order need to ensure that the supplier knows where to ship the goods or services and to whom to bill, and thus, they must add a ship-to and a bill-to address in Concur Invoice.

The admin can change or delete the ship-to or bill-to address. If the client admin deletes the ship-to or bill-to address, the record is only "soft deleted" and is still available to those requests that are using it.

The client admin may add as many ship-to and bill-to addresses as deemed necessary. To import or export multiple ship-to or bill-to addresses, client admins may use the Import or Export All functionality.

Once the client admin has added the ship-to addresses, the user can self-assign the available shipping address in **Profile > Profile Settings > Invoice Preferences**.

When clients have filled in the company address details in the **PO Configuration** sub-step of the **Invoice** page in Product Settings, this address information will automatically populate the bill-to and/or ship-to address in the **Company Locations** sub-step of the **Invoice** page of Product Settings.

NOTE: Concur Invoice will only create a bill-to or ship-to address automatically if no bill-to or ship-to address exist.
