Web Services

Section 1: Overview

NOTE: Web Services are not available to clients with the Concurforce product.

Administrators use the **Web Services** page to manage partner applications for the SAP Concur platform. The links on this page can register a partner application with SAP Concur, or enable a partner application to access your SAP Concur data.

Section 2: Infrastructure

The SAP Concur Platform infrastructure consists of:

- A user **interface to register** partner applications that will be using the web services
- A user **interface to enable** the partner applications for each company
- A common **authentication and authorization model** that will determine the application's level of access

NOTE: Some web services are only available with the SAP Concur Professional/Premium product.

For detailed documentation about the **Web Services** page and the available web services, refer to <http://developer.concur.com>.
